

I've reviewed **Future Motors Process Manual 2.docx**. This is much more useful than generic public research because it documents a real automotive Business Central implementation with CRM, vehicle sales, delivery, recovery, and after-sales service processes. [\[Future Mot...s Manual 2 | Word\]](#)

Important security issue

The manual contains what appears to be a Business Central production URL and training credentials. I won't reproduce them here. If those credentials are still active, they should be **changed immediately**, removed from the manual, and replaced with a placeholder such as:

- | |
|---|
| <ol style="list-style-type: none">1 Environment URL: Provided by IT2 Username: Provided by IT3 Password: Never store in process manuals |
|---|

The revised file should also be stored in a restricted company location rather than a public repository. [\[Future Mot...s Manual 2 | Word\]](#)

What the Manual Changes About Our CRM Plan

My earlier proposal was directionally correct, but the manual shows that the learning project should stay closer to **standard Business Central Relationship Management**.

The documented Future Motors process already uses:

1. **Contact**
2. **Opportunity**
3. **Sales Cycle Code**
4. **Sales Cycle Stages**
5. **Salesperson Code**
6. **Priority**
7. **Date of Last Interaction**
8. **Last Attempted Date**
9. **Next Task Date**
10. **Vehicle Sales Quote**
11. **Vehicle Sales Memo**
12. **Vehicle Sales Order**
13. **Vehicle Delivery**
14. **Vehicle Service Booking**
15. **Customer complaints and feedback**

It therefore behaves more like a connected automotive ERP/DMS than an isolated custom lead application. [\[Future Mot...s Manual 2 | Word\]](#)

Actual Customer Journey Found in the Manual

Sales Journey

- | | |
|----|---------------------------------|
| 1 | Contact |
| 2 | ↓ |
| 3 | Opportunity |
| 4 | ↓ |
| 5 | Activate Sales Cycle Stage |
| 6 | ↓ |
| 7 | Vehicle Sales Quote |
| 8 | ↓ |
| 9 | Vehicle Sales Memo |
| 10 | ↓ |
| 11 | Vehicle Sales Order |
| 12 | ↓ |
| 13 | Posted Sales Invoice / Shipment |
| 14 | ↓ |
| 15 | Delivery Challan |
| 16 | ↓ |
| 17 | Actual Vehicle Delivery |

The Contact record captures customer identity, address, mobile number, email, customer type, salesperson, geographic information, citizenship number, interaction dates, and next-task date. The user then creates an Opportunity, supplies its description, salesperson, priority and sales-cycle code, and activates the first sales-cycle stage. [\[Future Mot...s Manual 2 | Word\]](#)

The vehicle quote carries considerably more than a standard CRM opportunity. It includes finance mode, financing organization, payment mode, discount, accessories, insurance, commissions, tax deductions, agent information, and vehicle details including model, version, variant, VIN/chassis, engine or motor number, battery number, registration number, location, quantity, price, and discount. [\[Future Mot...s Manual 2 | Word\]](#)

Delivery Journey

After invoicing, the delivery process records whether the customer received the service manual, operator manual, blue book, and insurance book. It also records PDI information, test-drive information, chassis details, and actual delivery date before posting the vehicle delivery. [\[Future Mot...s Manual 2 | Word\]](#)

After-Sales Journey

- | | |
|---|-----------------|
| 1 | Service Booking |
|---|-----------------|

2	↓
3	Vehicle Visit
4	↓
5	Service Order
6	↓
7	Inventory Checklist / PDI
8	↓
9	Customer Complaints
10	↓
11	Service Lines
12	↓
13	Technician Assignment
14	↓
15	Parts Requisition
16	↓
17	Finish Service
18	↓
19	Billing
20	↓
21	Invoice and Gate Pass
22	↓
23	Instant / After-Service Feedback
24	↓
25	Complaint Follow-up

The service process links the customer with the vehicle through VIN/chassis number and registration number. It records booking and arrival times, service advisor, mileage, estimated cost, service plan, next-service date, complaints, repair work, technicians, parts, external services, billing, feedback, and complaints. [\[Future Mot...s Manual 2 | Word\]](#)

Best Architecture for Your Learning Project

Based on the manual, I recommend **not creating entirely separate custom Contact and Opportunity tables in Part 1.**

Instead:

Use Standard BC Objects Where Appropriate

- Standard Contact
- Standard Opportunity
- Standard Salesperson/Purchaser
- Standard sales cycles and sales-cycle stages

- Standard interaction concepts
- Standard Customer
- Standard Sales Header and Sales Line in later parts
- Standard Service Item, if your license and environment provide Service Management

Create Custom Objects for Automotive Requirements

- Vehicle Model
- Vehicle Variant
- Dealer/Branch mapping
- Test Drive Booking
- CRM Follow-up Activity, if standard interactions are insufficient
- Opportunity Vehicle Interest
- Opportunity Stage History
- Lost Opportunity Reason
- Vehicle Delivery Checklist
- Customer Vehicle Profile
- CRM Setup
- Lead assignment rules

This will teach you the most important ERP-development principle:

Extend standard Business Central whenever the standard functionality represents the business concept; create a new custom object only when the concept genuinely does not exist or cannot safely satisfy the requirement.

Revised Project Scope

For the standalone learning extension, we should stop at:

- 1 Contact
- 2 → Opportunity
- 3 → Sales Cycle
- 4 → Vehicle Interest
- 5 → Follow-up
- 6 → Test Drive
- 7 → Win/Loss
- 8 → CRM History

We should **not include vehicle quotation, invoicing, recovery, service order, or financial posting in Parts 1 and 2**. The manual proves those processes exist, but including them immediately would turn the exercise into a full Dealer Management System rather than a focused CRM learning project. [\[Future Mot...s Manual 2 | Word\]](#)

Revised Part 1 Direction

Part 1 should teach **standard CRM objects plus an automotive extension.**

Objects to Extend

Contact Table Extension

Add fields such as:

- Customer Type
- Province
- District
- Municipality
- Citizenship No.
- Preferred Dealer Code
- Preferred Product Category
- Preferred Contact Method
- Last Attempted Date
- Next Task Date
- Consent to Contact
- Lead Source

Some of these fields appear directly in the documented Contact process, while consent and preferred-contact fields are recommended improvements for safer CRM handling. [\[Future Mot...s Manual 2 | Word\]](#)

Opportunity Table Extension

Add:

- Dealer Code
- Product Category
- Interested Model Code
- Interested Variant Code
- Estimated Budget
- Finance Required
- Expected Purchase Date
- Lost Reason Code
- Competitor
- Test Drive Required
- Test Drive Completed

New Master Tables

- Honda Dealer
- Honda Vehicle Model
- Honda Vehicle Variant
- Honda Lead Source
- Honda Lost Reason

New Transactional Tables

- Honda CRM Activity
- Honda Opportunity Status Entry
- Honda Test Drive Booking — introduce the table in Part 1, with full scheduling logic in Part 2

Core Part 1 Flow

- | | |
|---|---|
| 1 | Create Contact |
| 2 | → Check Duplicate Mobile/Email |
| 3 | → Assign Salesperson |
| 4 | → Create Opportunity |
| 5 | → Select Sales Cycle |
| 6 | → Activate First Stage |
| 7 | → Add Vehicle Interest |
| 8 | → Create Follow-up Activity |
| 9 | → View Opportunity and Activity History |

This directly reflects the manual's Contact → Opportunity → Activate First Stage sequence.

[\[Future Mot...s Manual 2 | Word\]](#)

Revised Part 2 Direction

Part 2 should add:

- CRM Setup
- No. Series
- Test-drive scheduling
- Activity completion
- Opportunity stage validations
- Win/loss process
- FlowFields
- Role Center cues
- Integration events
- Pipeline reports

- Permission sets
- Automated AL tests

Recommended FlowFields

On the Contact:

- Open Opportunity Count
- Won Opportunity Count
- Open Activity Count
- Overdue Activity Count
- Test Drive Count

On the Opportunity:

- Activity Count
- Open Activity Count
- Test Drive Count
- Completed Test Drive Count
- Days Since Last Interaction

Role Center Cues

- My New Contacts
- My Open Opportunities
- My Follow-ups Today
- My Overdue Follow-ups
- My Test Drives Today
- Unassigned Contacts
- Opportunities Expected This Month
- Lost Opportunities This Month

Reports

1. Lead and Contact Source Analysis
2. Opportunity Pipeline
3. Salesperson Follow-up Performance
4. Test Drive Schedule
5. Lost Opportunity Analysis
6. Model Interest Analysis
7. Dealer-wise CRM Performance

Important Improvement: Separate CRM Stage from Sales Documents

The manual transitions from Opportunity into Vehicle Sales Quote, Memo, Order, Invoice, and Delivery. [\[Future Mot...s Manual 2 | Word\]](#)

For your project, that integration should eventually look like:

- | | |
|---|-------------------------------|
| 1 | CRM Opportunity |
| 2 | ↓ Win / Ready for Quotation |
| 3 | Create Vehicle Sales Quote |
| 4 | ↓ |
| 5 | Standard/custom sales process |

The Opportunity should **not contain all sales-document fields**. Finance, payment, tax, discount, VIN, inventory allocation, invoice, and shipment details belong to the quotation/order process.

CRM should retain references:

- Created Quote No.
- Created Order No.
- Customer No.
- Selected Vehicle/VIN
- Won Date
- Final Deal Value

That separation prevents the CRM table from becoming a large duplicate of the Sales Header.

Features from the Manual to Reserve for Later Parts

Part 3 — Quote Conversion

- Create vehicle sales quote from won opportunity
- Copy contact/customer details
- Copy model and variant
- Finance requirement
- Payment mode
- Insurance and accessories
- Link quote back to opportunity

Part 4 — Vehicle Delivery

- Delivery checklist
- PDI completion
- Document handover
- Actual delivery date
- Vehicle/customer association
- Delivery posting and history

The documented checklist includes service manual, operator manual, blue book, insurance book, PDI, test-drive and actual-delivery information. [\[Future Mot...s Manual 2 | Word\]](#)

Part 5 — Service CRM

- Service booking
- Vehicle lookup by VIN or registration
- Booking conversion to service order
- Complaint capture
- Technician assignment
- Parts requisition
- Service feedback
- Complaint follow-up

These processes are already extensively represented in the manual and should remain separate from the sales CRM foundation. [\[Future Mot...s Manual 2 | Word\]](#)

Process Manual Quality Observations

Before treating this file as a formal functional-requirement specification, it needs cleanup.

Current Strengths

- Covers the full automotive ERP lifecycle
- Contains actual Business Central screens
- Shows real user navigation
- Captures sales, delivery and after-sales processes
- Identifies many operational fields
- Includes reports and posted-history areas
- Demonstrates standard and custom BC functionality [\[Future Mot...s Manual 2 | Word\]](#)

Current Gaps

The document mostly explains **how users click through the system**, but it does not consistently document:

- Business purpose
- Preconditions
- Mandatory fields
- Field source
- Validation rule
- Status transition
- Approval rule
- Permission requirement
- Failure scenario
- Integration point
- Posting impact
- Triggered event
- Record created or modified
- Acceptance criteria

For development purposes, every feature should be rewritten in this format:

1	Process ID:
2	Process Name:
3	Business Purpose:
4	Actor:
5	Preconditions:
6	Input Records:
7	Steps:
8	Mandatory Fields:
9	Validations:
10	Status Changes:
11	Records Created:
12	Records Updated:
13	Posting Impact:
14	Permissions:
15	Error Scenarios:
16	Reports:
17	Integration Events:
18	Acceptance Criteria:

One Important Correction to Our Earlier Design

Previously, I proposed a separate Honda CRM Lead table. After reviewing this process manual, a better learning design is:

- 1 Contact = prospect/lead identity
- 2 Opportunity = potential vehicle sale
- 3 Activity/Interaction = follow-up work
- 4 Customer = converted commercial entity

This is closer to the existing implementation and teaches you how to extend Business Central rather than rebuild its CRM model unnecessarily.

A custom Lead table is justified only if the company needs a separate unqualified inbox before creating a standard Contact—for example, raw website leads that must be deduplicated, cleaned, assigned, and accepted first.

A more advanced future design could be:

- 1 Raw Lead Inbox
- 2 → Validate and Deduplicate
- 3 → Accept
- 4 → Create/Link Standard Contact
- 5 → Create Opportunity

But that should not be Part 1.

Immediate Next Deliverable

The strongest next step is to turn the manual and our analysis into a clean **Honda/Future Motors CRM Part 1 and Part 2 task specification**, matching the exact teaching style of your Student Management assignments:

- Object-by-object definitions
- Exact fields and data types
- Enums
- Table extensions
- Pages and page extensions
- Codeunits
- Actions
- Validation rules
- Status transitions
- Integration events
- Reports
- Test scenarios

- Concept-check questions
- Submission instructions

The uploaded manual gives us enough evidence to make that specification realistic while keeping confidential implementation details out of the learning repository.
